

Hello Beekeepers,

This is Claire Mitchell, the Sustainable Agriculture Programs Manager at Green Industries Institute in Monticello. I have been working with Tony Hogg to put together a three day intermediate beekeeper course for the Spring that will happen out at Green Industries. Help us spread the word! The dates for the course are Jan 28, Feb 4, and Feb 11, and will take place from 9am-12pm. The topics covered include colony management, pest management, and quality in honey production. The cost for the entire course is \$75. This is an excellent opportunity to learn from your local experts to become a better beekeeper.

Find out more about this class and others at our website: <http://nfcc.edu/green-industries/sustainable-farming-workshops>

You can contact me at mitchellc@nfcc.edu or call 850 973 1702.

Thanks!

Intermediate Beekeeping Course

Instructors: Master Beekeepers
This three-class course is for beekeepers who have had hives for two or three years. Master Beekeepers from the [Apalachee Beekeepers Association](#) will be instructing these workshops for intermediate level beekeepers to answer in-depth questions and help troubleshoot beyond the beginner level.

**Cost: \$75
for all three courses**
